DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, 17-23, 33-38, 40, 43, 46, 49, drawn to a molding process, classified in class 264, subclass 510.
 - II. Claims 7-12, 24-29, 39, 42, 45, 48, 51, drawn to a molded product, classified in class 428, subclass 413.
 - III. Claims 13-16, 30-32, 41, 44, 47, 50, drawn to a molding composition, classified in class 528, subclass 94.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions Group I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and materially different process, such as impregnating a fiber preform with a resin outside a mold, heating said fiber preform for wetting to occur and then placing said impregnated fiber preform in a mold under conditions of heat and pressure for curing said resin.
- 3. Inventions Group II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using

Application/Control Number: 10/642,325 Page 3

Art Unit: 1732

the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product such as injection molding the binder composition into a mold and molding said binder composition into a molded product.

4. Inventions Group II and III are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a molding compound in a molding process of a final product without impregnating a fiber preform and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

· Claim Objections

5. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. Misnumbered claim 48 has been renumbered 49. Claims 1-51 are pending in the instant application.

6. Claims 41, 44, 47 and 50 are drawn to a molding process, yet depend from a claim drawn to a composition. Further, claims 42, 45, 48, and 50 are drawn to a molded process, yet depend from a claim drawn to a molded product. Further clarification is required.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stefan Staicovici, Ph.D. whose telephone number is (571) 272-1208. The examiner can normally be reached on Monday-Friday 9:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael P. Colaianni, can be reached on (571) 272-1196. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.

Art Unit: 1732

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
